

Boom Lift Attachment

Boom Lift Attachments - Boom lifts are machinery that has a platform that may be lowered or lifted to different heights, therefore making this piece of equipment an important requirement in a wide range of professions. Offered in several specific varieties such as aerial lifts, scissor lifts, and knuckle boom lifts, each version operates very specifically.

Aerial platform lifts are most normally used to transport people at skiing lodges who are not comfortable using a ski lift. These platform lifts operate very similar to an elevator, skiers may be slowly but surely shuffled up the mountain, stopping at stations along the path until they contact the top. Aerial lifts are also used in construction, moving personnel securely up and down the sides of multi-level construction sites.

Scissor hoists are also in the boom lift category. They are used frequently by service companies as an ideal system to permit employees to complete maintenance and repair on wires and cables that are attached to poles. Telephone, cable and power corporations have relied on the proficiency of this type of boom lift for years.

Knuckle boom vehicles are made to be used in coarse terrain locales where the need to be able to change direction is necessary. This style of boom can fit into many tight places that a scissor lift cannot. Working between numerous equipment in a production plant or in close proximity stuck between two walls, the knuckle boom additionally features a standard platform fitted with rails for security and worker safety.

The style of boom jack required by firms will normally depend on the nature of the job required. Luckily, there are suitable types for nearly any task.
