The U.S. forklift division situated in Cleveland has a skilled team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

At first the domestic forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled lift trucks as part of a home-based equipment expansion venture. Sales of these products were initially targeted to state-run companies, large scale corporations, and the military. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical education grew to become the new focus for enhancing quality and product development.

Daewoo began the first domestic forklift business in 1967, and rapidly acquired a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological enhancements combined with sales success placed them in a situation of significant growth of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling market. This endeavor greatly expanded Daewoo's lift truck sales. Construction was completed in 1984 to facilitate a modern plant which helped set up the business for the manufacture of high added-value products suitable for export. In 1993, the company had a global sales system and started exporting models they had established through in-house technology, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into overseas marketplaces.
